July 2023 - September 2023

Na3mal

- Successfully collaborated with a team of 6 backend developers to produce high-end REST API for Tech-Blog website with MERN tech stack.
- I've learnt AGILE methodologies and managed to improve my team work and communication skills.

FreeLancer

Jan 2023 - present

Self-employed

PROJECTS

Green Cycle : successfully made a backend RESTful API for a project for ALEXANDRIA UNIVERSITY with fully functional authentication & authorization system , notifications system in the real time, and points system. (express.js, mongoDB, Socket.io ... etc.)

TokShop API Successfully made node.js REST API for E-Commerce website and mobile application , with very Strong Authentication and authorization system, clean Architecture, notifications system, payment system, fully functioning administration system, and Deployed the whole system to a VPS server (Linux based server) and configured domain name with our server. (socket.io, mongoDB, express.js ...).

Natours API fully functioning REST API for Travel tours company, where you can see the travel tours featured and you can see users' reviews on these tours and I implemented GEOSPATIAL Locations in the API so you can see on the maps the locations that the tour will take you through , this web application is fully server side rendered with node.js and pug view engine , and I used Stripe to implement payment methods so that user can book the tour they like. (express.js, MongoDB, webHooks...)

EXTRA-CURRICULAR ACTIVITIES

- Actively write [blog posts](#) and linkedIn posts help people with best practices to land their dream jobs.
- Trying to know more and more about new technologies and make full use of them in my new projects.
